#### Graphism

Atelier Perspective, R. Gigon, Sion.

June 2013

Studer Innotec was established in 1987, not as a result of market research, but founded on my wish to improve solar systems. Therefore it was natural to focus on the main component of a battery system: the inverter.

Three years later the company was manufacturing its first inverter models, eight years later it started to export them and then gradually opened up to new application areas (mobile applications, backup systems and industrial applications).

Today Studer Innotec provides an extensive product range with over 60 products that assure storage, conversion and management of energy, of which over 95% are exported through our distributor network with over 100 partners worldwide.

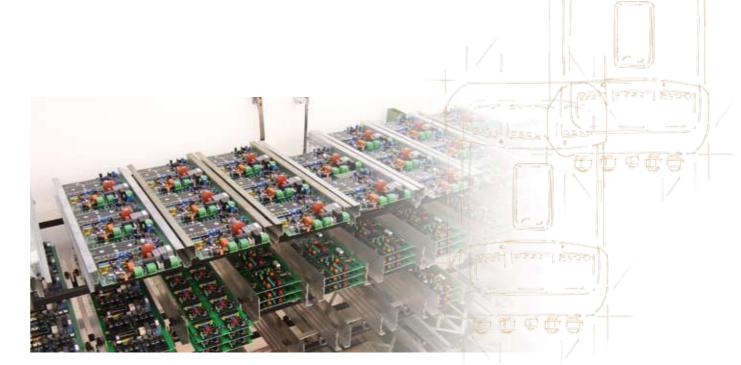

The key success factor in maintaining our competitive lead is constant innovation. Through its know-how and experience, Studer Innotec ensures the renewal of its product range as well as expanding into new applications such as self-consumption systems and mini-grids.

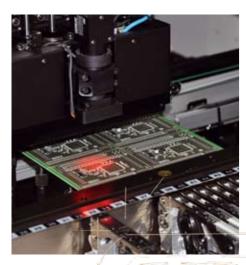

Our company's vision is the same as at its beginnings: more than a product, we offer innovative solutions to optimize any solar system whatever the application. These solutions are designed and manufactured at the same location, in Sion, Switzerland, as a result of the close collaboration and interaction with our customers.

#### Roland Studer

Founder and CEO of Studer Innotec SA

#### **Production Integration and Flexibility**

The company's philosophy has always been to master the complete process: from development to product sales. This is why Studer Innotec Ltd., since its beginning, is a company vertically integrated; therefore, capable of far greater flexibility than its competitors.

In other respects, to turn the markets expectations into products and services, a 10 people team is fully dedicated to Research & Development.

# The Performance Choice

Studer Innotec's high-tech concept of its products as well as the performance and reliability selection, drive the company to choose its components with the greatest care. This is the reason why the Studer Innotec Ltd. has selected the latest technologies; such as digital signal processors (DSP) that provide higher efficiency to its inverters.

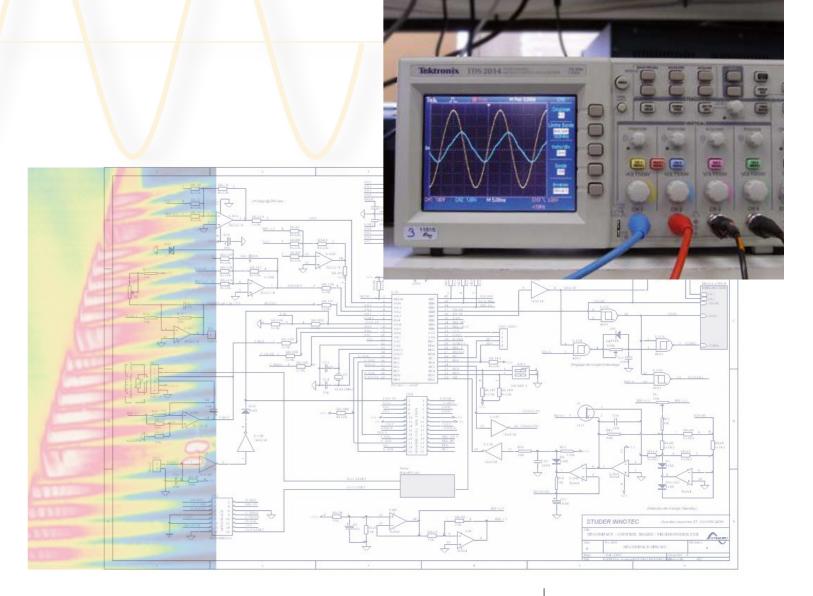

Quality choice will continue to guide Studer Innotec's strategic axis towards the future. Beyond performances, the next inverters will have increased ease in use and will offer greater versatility to the users.

#### **Proximity with Clients**

From research to industrialization, Studer Innotec Ltd. endeavors to carry on its human and financial investments in order to keep its lead in terms of global offer and proximity with clients. This closeness is maintained by a network of qualified service partners. Partner addresses can be found on the company website, under « Distributors ».

Security and comfort (lighting, heating, household appliances, leisure electronics, telecoms...) can now be provided by autonomous energy systems; when far away from any electrical grid, either by choice or reason.

These systems consist firstly of an energy source; normally a genset, a solar generator, a wind turbine or a combination of these;

A complete solar system can be built by combining an inverter from the AJ series and the «solar charge control» integra-

ted function (as an option). One single device can then both supply alternating current (AC) and charge the battery with

The inverter supplies, exclusively from a battery,

any kind of appliance using AC voltage, without

exception. It converts the battery's DC voltage into

AC voltage at a higher quality than what is availa-

ble from the public grid. The MPPT solar charge

controller optimally charges the battery from the

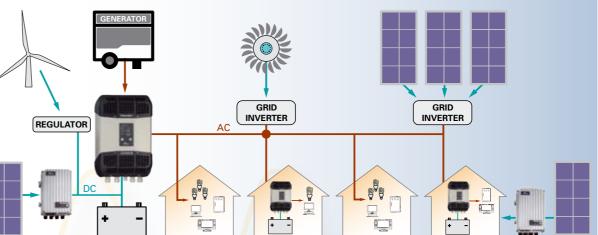

solar generator.

direct current (DC).

secondly of a battery storage, and then thirdly of devices (inverter-charger, battery charger) able to charge the battery from this energy source and to supply users with AC voltage (inverter, inverter-charger).

The examples below show the products in some stand-alone applications.

#### **Mobile applications**

The inverter-charger charges the battery from the grid or

from a genset, and powers any kind of electrical appliance. It converts the battery DC voltage to AC voltage. The

models equipped with the Smart-Boost system enable the

addition of the source's power to that of the inverter.

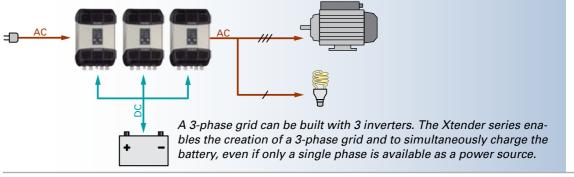

A simple on-board energy system is often necessary to power the AC voltage appliances, while the vehicle or the boat is away from the electrical grid (port, garage, camping...).

In this case, energy is stored in the battery, which is actually charged by power sources on-board, such as a genset, solar generator, wind turbine, alternator or a combination of these. Studer Innotec offers the product range that secures the management and conversion of

> this energy, while securing an optimal power supply to the on-board appliances.

**Xtender series** p. 14

**Compact series** p. 22

**Xtender series** p. 14 (900 - 72'000VA)

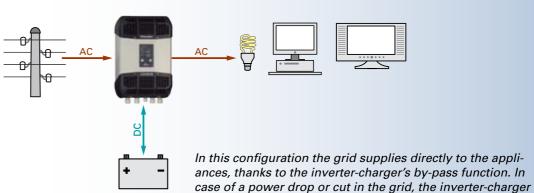

Appliances such as fridges, PCs, emergency lights, etc. which are supplied by the public grid and cannot afford any power cut, are electrically secured.

An inverter-charger with transfer relay or a combination of an inverter and a charger guarantees that the battery is well maintained and that an uninterrupted power supply to strategic appliances is sustained.

Studer Innotec Ltd. offers solutions from 275VA up to 72kVA with a one of a kind product choice that remains unchallenged on the market.

Uninterruptible power supply off-line

guarantees the appliances' power supply.

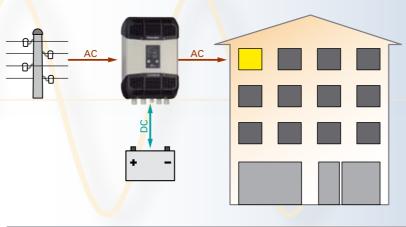

Inverters

**Xtender series** p. 14 (900 - 72'000VA)

**Compact series** p. 22 (1'400 - 4'000VA)

Individual Home backup

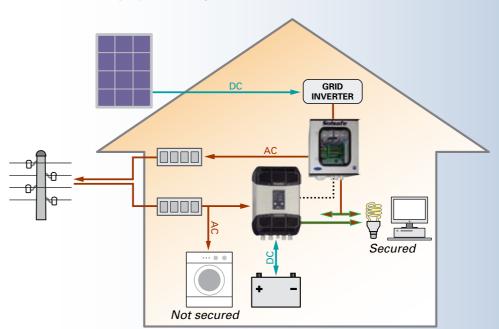

An inverter-charger is used there to provide a backup power in case of public grid outage. As soon as the power shuts off the inverter-charger switches on inverter mode and assures an uninterruptible power supply.

Inverters

**Xtender series** p. 14 (900 - 72'000VA)

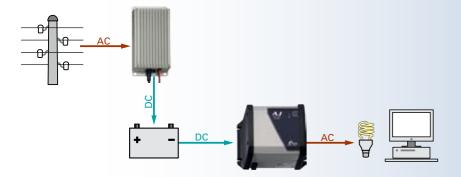

**Compact series** p. 22 (1'400 - 4'000VA)

Solsafe - a backup system for grid connected solar installations

The installation of our solution Solsafe in a grid connected solar system totally or partially secures the power supply in case of a power cut, and thus maintains the ongoing use of solar energy being produced (Application Note AN003/www.studer-innotec.com).

Uninterruptible power supply on-line

In this system, the battery charge functions and appliances' power supply are separated: On one side is a battery charger, and on the other, an inverter. Grid current fluctuations have no impact on the appliances.

STUDER

In order to give priority to consumption of the energy generated from your own solar- or renewable installation, different systems including the Xtender inverter-chargers can be set up.

These systems store excess energy produced during daytime in batteries to be used at a later time, maximizing the self-consumption. The public grid will only be used to import or to export small amounts of energy if absolutely necessary.

#### Optimising self-consumption with partial backup

This system has the advantage of being easily integrated into an existing grid-feeding installation even when its power is higher to that of the Xtender. The self-consumption is optimized by means of an expert system (SCADA) supplied by partners of Studer Innotec.

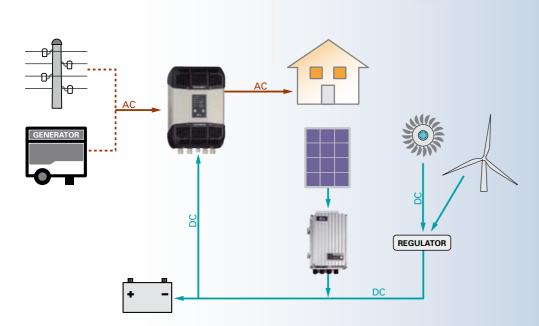

This system also allows creating a separate secure grid adapted for selected backup appliances (e.g. lights, cooling systems and communication).

STUDER

Inverters

**Xtender series** p. 14 (900 - 72'000VA)

#### Priority to renewable energy without grid-injection

When it is forbidden or there is no incentive to inject energy into the public grid, an Xtender inverter-charger combined with a VarioTrack MPPT solar charge controller will minimize the grid consumption in favour of the locally produced energy. They will also guarantee an energy supply in case of grid-failure. This solution is easy to set-up using Studer products.

Inverters

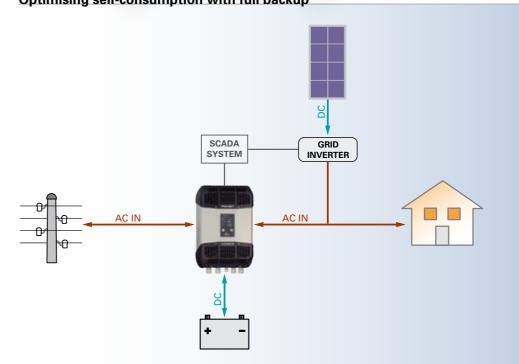

**Xtender series** p. 14 (900 - 72'000VA)

MPPT solar charge controller

VarioTrack series (65 - 80A)

p. 26

#### Optimising self-consumption with full backup

This system will secure all users (household) however appliances it requires that the power of the Xtender is at least equivalent to the grid inverter and that it covers the household's power needs. The self-consumption is optimized by means of an expert system (SCADA) supplied by partners of Studer Innotec. A correctly sized system adapted to meet the customer's needs guarantees the energy supply during power outages of the public grid, even for longer periods.

#### Xtender XTH

XTH 3000-12 XTH 5000-24 XTH 6000-48 XTH 8000-48

The Xtender series offer an optimal use of all sources that can be found in hybrid systems, whatever their connecting mode (AC or DC bus), up to the nominal power of the Xtender system (single, parallel and/or threephase).

#### **Xtender Series**

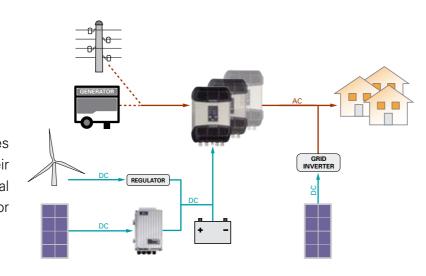

The Xtender series provides unmatched freedom of use due to its many functions. In a basic application, it offers a total package: the functions of inverter, battery charger, transfer system and assistance to the source. These functions can be combined and controlled in a totally automatic way for exceptional ease and optimal management of available energy.

The Xtender is equipped with a command entry and 2 configurable auxiliary contacts. This allows an automatic control of the genset or a loadshedding when the battery voltage is too low. The flexibility then obtained makes it possible

to implement special functionnalities, often necessary for a good energy management in standalone systems.

#### Features and performances

- Outstanding efficiency and overload.
- Perfect management and limitation of AC sources.
- Power shaving of the consumption peaks.
- Automatic allocation of the power available.
- Active filtering of the load steps on the genset.
- Automatic protection of the sources against overload.
- Battery priority (or to renewable sources).
- Parallel and three-phase setting, up to 9 units (72kVA).
- Powerful multi-stage PFC charger.
- Ultra-short transfer time (from 0 to 15ms max.).
- Automatic and efficient stand-by.
- 2 programmable auxiliary contacts (optional on the XTS).
- Compatible with AC coupling.
- XTS electronically protected against reverse polarity.
- Display, programming and data logging integrated in the remote control RCC.
- Interactive with the Battery Status Processor (BSP).
- RS-232 communication for remote supervision.

\* For the 120Vac/60Hz version, -01 is added to the model designation.

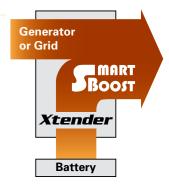

\*\* These features are valid only when using the cooling module ECF-01.

Complete technical specifications on page 32.

#### Function Smart-Boost and active filtering

With this function it is possible to interact directly with the AC source (Genset or grid) and to implement some basic functions such as:

- Efficient and immediate limitation of the current of the source, including fore non linear or inductive/ capacitive loads, protecting efficiently the breakers during connection to shore power or to a camping power counter with limited current (function of power shaving and of power assistance) (more information on our website and in the Application Note AN001/www.studer-innotec.com).
- Power shaving of load steps on the generator allowing therefore an optimal sizing of the generator and asssuring the best possible efficiency of the fossile fuels (function of filtering and of power assistance).

The function of assistance to the source enables also to implement advanced functions such as the priority use of renewable energy, even when the grid is available (more information on our website and in the Application Note AN002/www.studer-innotec.com).

#### RCC-02

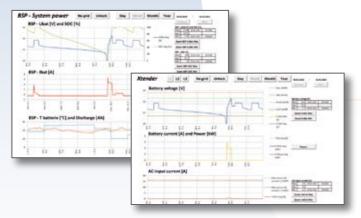

#### Remote control and programming centre RCC-02 or RCC-03

Apart from the enclosure difference, adapted for wall or panel mounting, both units have exactly the same features and allow the user to survey his system and fully customize it to his needs. RCC gives a controlled access to the many adjustable parameters of the Xtender. It enables the setting of the charge curve of the battery, the programming of the auxiliary contacts and gives access to a lot of operation options. Thanks to its graphic display RCC provides clear and comprehensive indications on the state of the system in selectable language. The unit memorizes and displays the events that occurred on an installation and so it does anticipate the problems that might appear. A slot for a SD card is available and it allow the parameters record and download as well as the full software update.

#### Data logging and analysis

Analyze easily your data with the RCC-02/03 Data logger function that will record on the SD card the main electrical values of your Xtender system during its operation.

These standards enable the follow up on the system's energy consumption evolution, to check the power cuts, the state of the auxiliary contacts, the input currents and voltages, etc.

Studer Innotec Ltd. offers for free two graphical and analysis tools, Xtender Data Analysis Tool and Xtender Matlab® Data Analysis (more information on our website and in the Application Note AN006/www.studer-innotec.com).

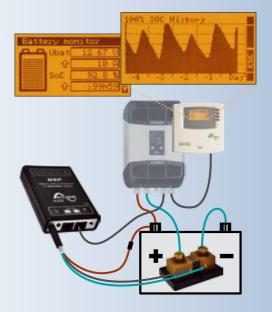

#### **Battery Status Processor BSP for XTENDER systems**

One of the most important information for a safe and effective operating of an energy system with batteries is their state of charge. The BSP offers, for Xtender systems, a highly precise measuring and an extremely efficient algorithm that calculates the state of charge in the most accurate way.

The remote control RCC-02/03 provides the display, the data logging, the graphical display of the state of charge history and the settings. Values of the BSP can be used in the programming of the Xtender system. Besides, 17 different values can be displayed like for instance:

- · State of charge
- Voltage (12-24-48Vdc)
- Current
- Time to go
- Throughput energy
- Battery temperature

The 2 models BSP 500 and BSP 1200 are supplied respectively with a shunt 500/1200A and 2 m cable for battery connection, as well as with 5 m communication cable.

Accessories		XT5	хтм	хтн
Ac Control of the Con	RCC-02/-03  The remote control module (with 2m cable) enables the setting of the parameters as well as the display of the values measured. By means of a SD card it is possible to log the system data, to save and restore the parameters of the system. This module is available either for wall mounting (model RCC-02), or for panel mounting (model RCC-03).	•	•	•
ST AG	<b>BTS-01</b> Battery temperature sensor (with 5 m cable) offering the automatic compensation of the adjustable thresholds of the battery voltage.	•	•	•
	<b>RCM-10</b> Module for rail DIN mounting (with 5 m cable) giving access to the main ON/OFF and to the command entry with the models XTS and XTM.	•	•	
And Value	BSP 500/1200  Module meant for the measuring and calculating of the battery state of charge (with 5 m cable). This module is connected to the communication bus of the Xtender. It allows the display and the datalogging of the values measured and calculated (see opposite screens) and also the control of the 2 auxiliary contacts of the Xtender.	•	•	•
9°	Xcom-232i Communication module with RS-232 port and 2 m RJ45 cable, allowing access to the parameters and measured values of the Xtender system. It makes the link between an Xtender system and a SCADA supervision or control system (not supplied).	•	•	•
	Xcom-MS Bridge for a communication between an Xtender system and one or several MPPT chargers Tristar (with 2 m cable). With this module it is possible to set the parameters and to have access to the values measured in the solar charger, as well as to synchronize the charging profile of the battery. The main values can be stored in the SD card of the module RCC or are accessible by means of the communication module Xcom-232i.	•	•	•
	ARM-02 This module only meant for the XTS models and for rail DIN mounting, is equipped with 2 auxiliary contacts controlled by the XTS. This function is already integrated in the models XTM and XTH.	•		
00	<b>ECF-01</b> External cooling module (IP54) for models XTS. The use of this accessory will increase the power of the XTS. The ECF-01 is directly installed on top of the XTS casing and its mounting can be done at any time after installation.	•		
	X-Connect  Mounting frame for multi-XTH system, supplied as a kit. The frame is equipped with DC breakers and fuses, and with rail DIN for the mounting of protection devices upstream and downstream (see p. 20).			•
$\Diamond$	CAB-RJ45-8-xx Communication cable for the connection between Xtenders and to all external accessories. The cables are available in the following lengthes: 2, 5, 10, 20 or 50 m (xx stands for the length). For instance: one system with 3 Xtenders requires 2 cables of 2 m. One cable is supplied with every accessory. However a longer cable can be ordered when necessary.	•	•	•

# The main configurations offered by the Xtender series

#### Wide modularity

By the implementation of several units, it is possible to create a 3-phase source or to set them in parallel to increase the power available without extra cost. Up to 9 inverters of the Xtender serie shall therefore be combined together up to 72kVA!

Easy set up of multi-units

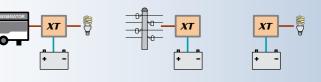

Compatible with standard cable channel (230 x 60 mm)

#### Xtenders in the heart of the Spitzbergen...

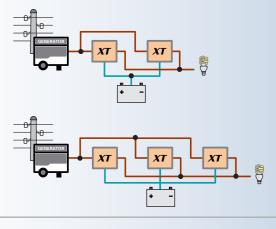

#### Inverter, charger and transfer relay

The Xtender basically works as an inverter and as a charger, combined with a transfer relay.

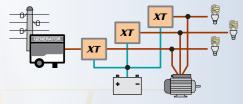

#### 2 or 3 units in parallel on 1 phase

Increase of the power on one phase by setting 2 or 3 Xtender in parallel.

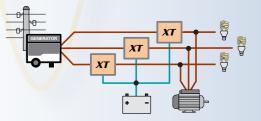

#### 1 phase in and 3 phase out

Three-phase power supply from a single phase source.

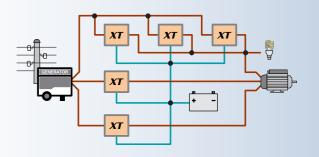

#### 3 phase in and 3 phase out

Three-phase source for a three-phase power supply.

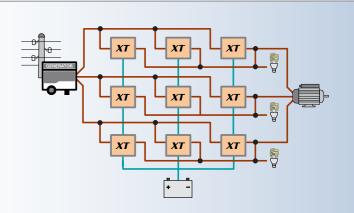

#### 3 phase + with one reinforced phase

Three-phase power supply with increase of the power on one phase by setting 2 or 3 Xtender in parallel on this phase.

#### 3 Xtender in parallel on 3 phases

Three-phase power supply with 3 Xtender on each phase, for power up to 72kVA.

- 3 Pre-installed DIN rails
- 4 Interconnection pipes and gland for auxiliary contact wiring
- 5 Interconnection pipes and gland for AC wiring
- 6 Interconnection pipes and gland + 90 mm<sup>2</sup> wire terminated with appropriates ring tongues for DC wiring from Xtender to breakers and fuses

Screws set for frame assembly

# Applications

# Solsafe: the anti-blackout system for grid connected solar installations

Despite a solar system on your house, in case of power outage, the grid inverters will shut off and the solar generator, whatever its size, will be useless. Studer Innotec Ldt has developped, already in 2004, a concept in which its inverter-chargers allow to keep energy available from the solar generator, even in case of a power cut.

#### Solsafe S-Box

#### Compared to other similar solutions, it offers:

- Great system flexibility by choosing both the grid inverter power (matching the solar generator) and the stand-alone power (matching the needs for autonomous energy) independently, as long as the stand-alone inverter is as big as, or bigger than the grid inverter.
- The choice of the grid inverter allows working with standard well known products.
- To choose the grid inverter with any voltage input range, independently from the battery voltage.
- A possible and easy upgrade of existing grid-connected solar installations.

# S-Box: a genuine cabling solution to implement the Solsafe

- Hassle free cabling
- Quick installation
- Easy commissioning

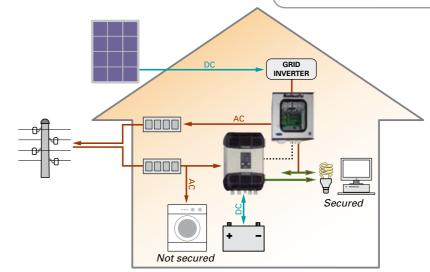

#### The S-Box can be supplied in 4 versions:

For single phase application:

-	Solsafe box 25A for Compact	S-Box-25C
_	Solsafe box 25A for Xtender	S-Box-25X

- Solsafe box 25A for Compact with ENS-26..... S-Box-25C-E
- Solsafe box 25A for Xtender with ENS-26...... S-Box-25X-E

For Solsafe implementation in 3ph systems, a schematic is at disposal on simple request.

# Solsafe – a backup system for grid connected solar installations

The installation of our solution Solsafe in a grid connected solar system enables to secured totally or partially the power supply in case of a power cut, and so to keep on using the solar energy being produced (Application Note AN003/www.studer-innotec.com).

#### **COMPACT**

C 1600-12 C 2600-24 C 4000-48

#### **Compact series**

The Compact series models consist of 3 fully automatic functions: a sine wave inverter, a battery charger and a transfer system. Equipped with highend technology, they optimally perform, thanks to Studer Innotec's extensive experience in the field of electrical supply.

#### Features and performances

- True sine wave voltage.
- Suitable for any kind of electrical appliance.
- Reliable and silent working with all kind of loads.
- Outstanding overload capabilities.
- Stand-by level adjustable over a large range and from a very low threshold.
- 4 STEP battery charger with PFC.
- Ultra-fast transfer relay.
- High efficiency.
- Full internal protection.
- Ultra-fast regulation.
- Microprocessor controlled.

#### Norm E certification

The XPC 1400-12, XPC 2200-24, C 1600-12 and C 2600-24 are certified to the ECE-R 10 norm.

Compact range	Output power P30/Pnom	Battery voltage	AC voltage	Charge current	Transfer current	Solar option (-S)

<sup>\*</sup> For the 120Vac/60Hz version, -01 is added to the model designation.

Complete technical specifications on page 33.

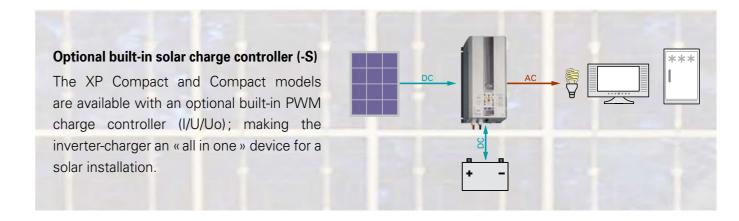

#### **Multifunctional contact**

The 16 A. potential free contact can be programmed according to the user wishes. It reacts according to battery levels, as well as to the system status (alarm conditions, public grid presence, sunlight's presence...), and provides:

- Automatic disconnection of second priority users (conditional supply).
- 2/ Alarm signalization, acoustic signal, MODEM, radio alarm etc.
- 3/ Conditional battery charge.

Battery

voltage

#### AJ series

The AJ range consists of sine wave inverters that convert a battery's DC voltage into AC voltage, which can be used by all electrical appliances.

#### **Features and performances**

- High and steady efficiency.
- Outstanding overload capabilities.
- Digital regulation and control by microprocessor.
- Electrical supply to any type of appliance.
- Full internal protection.
- Battery lifetime optimization (B.L.O.) function.
- Supplied with battery and AC cables.

Solar

option (-S)

AC

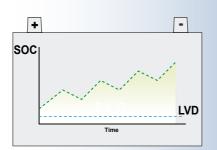

voltage

#### Norm E certification

The AJs in 12 and 24Vdc are certified to the ECE-R

### Battery Lifetime Optimization: B.L.O.

With this function the AJ inverters offer an advanced protection of the battery, by a smart management of the low voltage disconnection (LVD).

#### Accessoire

#### JT8 Remote control

Enables the control (ON/OFF) and the remote display (ON / Standby / Temporary off).

(supplied with a 5 m cable)

AJ 1000-12, AJ 1300-24 AJ 2100-12, AJ 2400-24

#### Option plug for remote control RCM

Connection (plugs male and female) to start/stop an inverter AJ under certain circumstances:

- RCM 01: ON when a contact is closed.
- RCM 02: ON when a voltage is present on the plug.
- RCM 03: ON when a contact is open.

For the AJ inverters 275 to 700VA. Supplied with a «connector Jack» 3.5 mm.

# + - ..

#### Option built-in solar charge controller

For a complete solar system!

The models AJ can be supplied equipped with an optional integrated PWM solar charge controller, making the inverter an «all in one» device for a solar installation.

#### Rural electrification (Solar Home System)

The rural electrification and the inverters of the AJ series: excellence to the benefit of the development of remore areas and populations. Choosing AC voltage for the rural electrification systems is going for

simplicity, reliability and cost saving. Indeed, compared with a DC voltage one, a system with an inverter is often more efficient from 100W of solar power.

The AJ series, due to its overload capability and to its very reliable stand-by system adjustable from 2W, is the most suitable range of inverters to meet the rural electrification technical and economical requirements.

Output power

P30/Pnom

<sup>\*</sup> For the 120Vac/60HZ version, -01 is added to the model designation. Complete technical specifications on pages 34-35.

#### VarioTrack series

The VarioTrack solar charge controller maximizes the energy generated from solar panels in any solar installation. It contains a MPPT (Maximum Power Point Tracking) algorithm that continuously tracks the maximum power point and automatically charges the batteries in an optimal way with all the available solar power.

**VarioTrack** VT-65

#### **Features and performances**

- Easy and safe commissioning with full protection against incorrect wiring
- Rugged and durable, this device is designed to perform in harsh environmental conditions (IP54)
- High conversion efficiency, 98%
- Up to 15 VarioTrack in parallel on the same communication bus
- 4 step charger for longer battery life
- Low self-consumption: <1W in night time mode
- Display with 7 LEDs showing status and current
- Comprehensive display, programming and datalogging with RCC-02/-03
- Suitable for any solar system
- Optimal usage in an Xtender system with a synchronized battery management

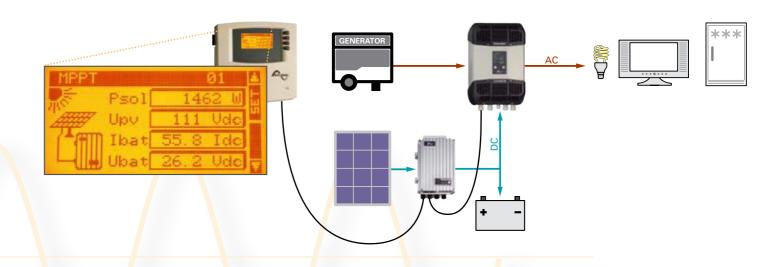

VarioTrack range	Nominal battery voltage	Maximum power of the solar generator	Maximum voltage of the solar generator	Maximum charging current to the battery
	12 V	1000 W	80 Vdc	
VT-65	24 V	2000 W	150 Vdc	65A
	48 V	4000 W	150 Vdc	
	12 V	1250 W	80Vdc	
VT-80	24 V	2500 W	150 Vdc	80A
	48 V	5000 W	150 Vdc	

<sup>\*</sup> Complete technical specifications on pages 36.

#### The VarioTrack in an Xtender system

Designed to function in any solar installation, the VarioTrack is working optimally in an Xtender system. The communication between the two devices allows in particular for a synchronized battery management.

#### Display and programming possibilities

The VarioTrack is fitted with several indicator lights and a control button for its basic operation. It is also possible to do basic programming using the DIP switches situated inside the device.

By adding a remote control and programming center RCC-02/-03, the VarioTrack can use all functions available in the remote control such as display, programming, data logging etc.

Accessories		VT-65	VT-80
AC COSC	RCC-02/-03 Remote control and programming centre The remote control module (with 2m cable) enables the setting of the parameters as well as the display of the values measured. By means of a SD card it is possible to log the system data, to save and restore the parameters of the system. This module is available either for wall mounting (model RCC-02), or for panel mounting (model RCC-03).	•	•
BTS-01	BTS-01 Battery temperature sensor  Battery temperature sensor (with 5 m cable) offering the automatic compensation of the adjustable thresholds of the battery voltage.	•	•

**Battery chargers** 

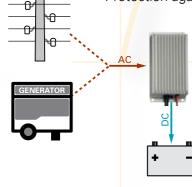

#### **MBC** series

The MBC chargers enable battery charging from an AC voltage supply source (genset, public grid, shorepower, etc.). These chargers are also watertight and therefore especially designed for outdoor applications (IP 65).

#### Features and performances

- Universal input voltage.
- Charge of lead acid batteries with liquid or gelled (GEL) electrolyte.

MBC range	Battery voltage	Input voltage	Output current	Output
MBC 12-06/1	12 Vdc	230 Vac ±15%	6 A	1
MBC 12-15/1	12 Vdc	230 Vac ±15%	15 A	1
MBC 24-03/1	24 Vdc	230 Vac ±15%	3 A	1
MBC 24-08/1	24 Vdc	230 Vac ±15%	8 A	1
MBC 24-32/1	24 Vdc	230 Vac ±15%	32 A	1

Complete technical specifications on page 37.

#### MDCI and MDC series

The DC/DC converters type MDCI and MDC are used, depending on the model, either to step up or to step down a DC voltage.

The MDCI range converters are electrically isolated.

#### **Features and performances**

- High efficiency.
- Low consumption.
- Protection against short-circuit, overheat, overvoltage and reverse polarity.
- Great stability of the output voltage for a more reliable system.

MDCI range	Power	Output Current	Input variant	Output variant	Isolated
MDCI 100	100 W	8/4 A	A/B/C/D	12.5 or 24 Vdc	Yes
MDCI 200	200 W	16.5/8 A	A/B/C/D	12.5 or 24 Vdc	Yes
MDCI 360	360 W	30/15 A	A/B/C/D	12.5 or 24 Vdc	Yes
MDCI 360 A24 Charger	330 W	30/15 A	А	24 Vdc	Yes

A = 9-18 Vdc(ex. MDCI 200 D24) B = 20-35 VdcC = 30-60 VdcD = 60-120 Vdc

MDC range	Power	Output Current	Input voltage	Output voltage	Isolated
MDC 1224-7	170 W	7 A	9-18 Vdc	24 Vdc	No
MDC 2412-5	65 W	5 A	18-35 Vdc	13.2 Vdc	No
MDC 2412-8	105 W	8 A	18-35 Vdc	13.2 Vdc	No
MDC 2412-12	160 W	12 A	20-35 Vdc	13.2 Vdc	No
MDC 2412-20	275 W	20 A	20-35 Vdc	13.8 Vdc	No
MDC 2412-30	415 W	30 A	20-35 Vdc	13.8 Vdc	No

Complete technical specifications on page 37.

The MDC 2412-20 and 2412-30, as well as the MDCI 360 A24 « Charger » can also be used to charge a battery.

#### **MOSFE**T battery splitters

#### MBI series

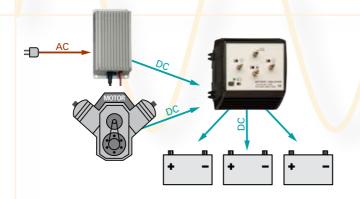

The MBI MOSFET battery splitters generate an insignificant voltage drop. They supply the charger's or alternator's current to several batteries. All batteries are thus charged at the same time, and therefore will not charge or discharge each other.

MBI range	Input	Charge current	Charge input	Outputs
MBI 100/2	12/24 Vdc	100 A	1	2
MBI 150/2	12/24 Vdc	150 A	1	2
MBI 100/3	12/24 Vdc	100 A	1	3
MBI 150/3	12/24 Vdc	150 A	1	3
MBI 200/3	12/24 Vdc	200 A	1	3
MBI 2-100/3	12/24 Vdc	100 A	2	3

Complete technical specifications on page 38.

#### Features and performances

- Automatic adjustment to the batteries voltage.
- Possible charge of the battery from an alternator
- Voltage drop < 0.4 V at 100 Amp.</li>
- Suitable for electronic alternators.

#### **Batteries separators**

The MBR batteries separators allow to supply the auxiliary battery or the appliances, as soon as the mainbattery voltage is high enough.

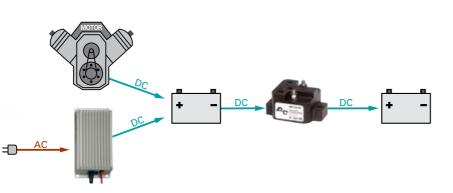

4	T.A.B.
4	
	STLOVED TO THE PARTY OF THE PAR
-	¥ 🖼 (€

MBR range	Battery voltage	Charge current	Batteries
MBR 12/24-100	12/24 Vdc	100 A	2

MBR 12/24-500	12/24 Vdc	500 A	2

Complete technical specifications on page 38.

#### **Features and performances**

- Insignificant voltage drop.
- Protects the auxiliary battery from any overvoltage.

**Battery protection** 

#### MBW series

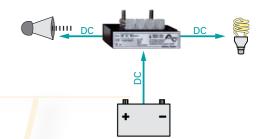

The Battery Watch protects the battery from an excessive discharge and also the consumers in case of overvoltage.

#### **Features and performances**

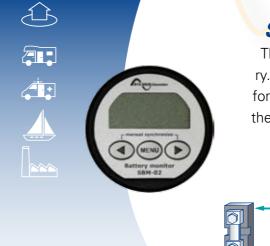

- Programming the connection and disconnection voltages by jumpers.
- MOSFET switches, therefore no sparks.
- Alarm output to indicate excessive voltage drops.

MBW range	Maximum current	Operating voltage range (Vdc)
MBW 40	40	6-35
MBW 60	60	6-35
MBW 200	200	8-32

#### **Battery** monitoring

#### **SBM-02**

The SBM-02 is a highly accurate battery monitor with a history data memory. It is supplied together with a 500A/50mV shunt. This device is designed for 12 and 24V batteries. The optional SBM-PS-02 voltage pre-scaler extends the use of the SBM-01 to 27-175V batteries.

#### Features and performances

- Digital display of the 6 most important parameters of a DC power system:
  - 1. Battery voltage (V)
  - 2. Current (A)
  - 3. Consumed Ampere-hours (Ah)
  - 4. Sate-of-charge (%)
  - 5. Time-to-go (h:m)
  - 6. Temperature (°C or °F)

#### Optional accessories

- Connection kit, type SBM-CAB-20, including 20 m of twisted pair cable (3 x 2 x 0.5 mm²) and 2 fuseholders.
- Communication kit, type SBM-COM, including RS232 interface box, 1.8 m of 9p DSUB serial cable and software.
- Communication kit, type SBM-COM-USB, including USB interface box, 1.8 m of USB cable and software.
- Temperature kit, type SBM-TEMP-20, with a temperature sensor and 20 m cable.
- Shunt 1200 A / 50 mV, type SH-1200-50, for battery monitoring in large system.

Model		VT-65		VT-80			
Electrical characteristics PV array side							
M : 1 1/00T0)	12 V	24 V	48 V	12 V	24 V	48 V	
Maximum solar power recommended (@STC)	1000 W	2000 W	4000 W	1250 W	2500 W	5000 W	
Maximum solar open circuit voltage	80 Vdc	150	Vdc	80 Vdc	150	Vdc	
Maximum solar functional circuit voltage	75 Vdc	145	Vdc	75 Vdc	145	Vdc	
Electrical characteristics battery side							
Maximum output current		65 A			80 A		
Nominal battery voltages		Autom	atic / manual s	set to 12, 24 or	r 48 Vdc		
Operating voltage range		Abo	ve battery volt	tage, minimur	n 7 V		
Performances of the device							
Power conversion efficiency (in a 48 V typical-system)			98	3 %			
Maximum stand-by self-consumption (48 V)			25 mA	> 1.2 W			
Maximum stand-by self-consumption (24 V)			30 mA	> 0.8 W			
Maximum stand-by self-consumption (12 V)			35 mA	> 0.5 W			
Charging stages		4 stages	: Bulk, Absorp	tion, Float, Eq	ualization		
Battery temperature compensation (available with accessory BTS-01)	-3 r	nV <mark>/°C /cell</mark> (2	5°C ref) defaul	t value adjusta	able -8 to 0 m	/ /°C	
Electronic protections							
PV reverse polarity			U <mark>p t</mark> o –	150 Vdc			
Battery reverse polarity			Up to –	150 Vdc			
Battery overvoltage	Up to 150 Vdc						
Over temperature			Prote	ected			
Reverse current at night			Prevented	by relays			
Environment							
Operating ambiant temperature range			-20 to	o <mark>55</mark> °C			
Humidity			10	0 %			
Ingress protection of enclosures	IP54, IEC/EN 60 <mark>5</mark> 29:2001						
Mounting location	indoor						
General data							
Warranty			5 y	ears			
Weight		5.2 kg			5.5 kg		
Dimensions h/w/l [mm]		120 / 220 / 31	0		120 / 220 / 350	)	
Parallel operation (separated PV arrays)			Up to 15	devices			
Max wire size			35 r	mm²			
Glands			M 20	× 1,5			
Communication							
Network cabling		5	STUDER comn	nunication BU	S		
Remote control and display	RCC-02/-03 / Xcom-232i						
Menu languages	English / French / German / Spanish						
Data logging		With RCC-02	2/03 on SD car	d · One point	every minute		
Accordance to standards							
CE compliant		EMC 2004/1	08/CE · LV 200	6/95/CE · RoH	S 2002/95/CE		
Safety	IEC/EN 62109-1:2010

#### MBC series

Model	MBC 12-06/1	MBC 12-15/1	MBC 24-03/1	MBC 24-08/1	MBC 24-32/1				
Battery voltage (Vdc)	12	12	24	24	24				
Input voltage (Vac)			230 ±15% (40 - 60 Hz)						
Charge voltage (boost) (Vdc)	14.4	14.4	28.8	28.8	28.8				
Charge voltage (float) (Vdc)	13.8	13.8	27.6	27.6	27.2				
Output (A)	6	15	3	8	32				
Cooling			Heat sink						
Outputs		1							
Efficiency		> 85 %							
Ambient temp. range			-25 to 50°C						
Dimensions lxwxh (mm)	155x80x36	195x100x47	155x80x36	195x100x46	158x245x47.5				
Weight (kg)	0.9	1.8	0.9	1.8	3.8				
Switch to Floating mode (A)	0.2	0.8	0.2	0.4	3.5				
Secondary fuse (A)	7.5	20	7.5	15	40				
Input wired	•	•	•	•	•				
Ouput wired	•	•	•	•	•				
Warranty			2 years						

#### MDCI and MDC series

#### MDCI - DC/DC converter, switch-mode, isolated

Model	MDCI 100	MDCI 200	MDCI 360	MDCI 360 Charger
Power (W)	100	200	360	330
Input variants (Vdc)*	A-B-C-D	A-B-C-D	A-B-C-D	A
Output variants (Vdc/A) ± 2%	12.5/8-24/4	12.5/16-24/8	12.5/30-24/15	27.6/12
Output current (A)	8/4	16.5/8	30/15	13
Galvanic isolation	•	•	•	•
Isolation voltage (V)		41	00	
Efficiency @ full load (%)		>	85	
Off-load current (mA)		<	25	
Operating temperature		-20 /	+45°C	
Ambiant temp. (20°) increase after 30 min. @ full load	25°C		30°C	
Cooling	Convection	Fan		
Dimensions HxWxD (mm)	49x88x152	49x88x182 64x163x160		
Weight (gr)	500	600	14	400
* A = 9-18 Vdc B = 20-35 Vdc C = 30-6	60 Vdc D = 60-120 Vdc	;		

#### MDC -DC/DC converter, switch-mode, not-isolated

Model	MDC 1224-7	MDC 2412-5	MDC 2412-8	MDC 2412-12	MDC 2412-20	MDC 2412-30	
Power (W)	170	65	105	160	275	415	
Output current (A)	7	5.5	8	12	20	30	
Input (Vdc)	9-18	18	-35		20-35		
Output (Vdc)	24		13.2		13	3.8	
Efficiency @ full load (%)		90					
Off-load current (mA)	< 15 < 5 25					5	
Operating temperature			-20 / -	+40°C			
Ambiant temp. (20°) increase after 30 min. @ full load	30	)°C	20°C	30°C	33	°C	
Cooling			Convection			Fan	
Dimensions HxWxD (mm)	49x88x98	49x88x68	49x9	8x88	49x88x126	49x88x151	
Weight (gr)	300	170	250	260	480	600	

Model	MDC 1224-7	MDC 2412-5	MDC 2412-8	MDC 2412-12	MDC 2412-20	MDC 2412-30
Power (W)	170	65	105	160	275	415
Output current (A)	7	5.5	8	12	20	30
Input (Vdc)	9-18	18	-35		20-35	
Output (Vdc)	24	24 13.2		13.8		
Efficiency @ full load (%)	90					
Off-load current (mA)	< 15 < 5			2	5	
Operating temperature	-20 / +40°C					
Ambiant temp. (20°) increase after 30 min. @ full load	30°C		20°C	30°C	33	°C
Cooling	Convection Fan			Fan

#### MBI series

#### MBI – Battery isolator, voltage drop free

Model	MBI 100/2 IG	MBI 150/2 IG	MBI 100/3 IG	MBI 150/3 IG	MBI 200/3 IG	MBI 2-100/3
Input nominal voltage (Vdc)		12/24				
Input voltage range (Vdc)			8-3	30		
Charge current max. (A)	100	150	100	150	200	100
Input number			1			2
Battery banks	2	2 3				
Voltage drop @ 10a/20A (V)		0.05 / 0.1				
Consumption (mA)		0				
Alternator start	•	•	•	•	•	
Operating temperature (°C)			-40 /	+85		
Dimensions LxHxD (mm)	146x8	146x85x92		146x85x152		
Weight (gr)	780	810	780	810	815	780
Nominal voltage 12 or 24V			Automatic	detection		
Insulation to ground			> 500V (	@ 60Hz		
Warranty			2 ye	ars		
Norms		EN 50081-1 (emission) EN 50082-1 (immunity) EN 60950-1 (safety)				

#### MBW series

#### MBW - Battery watch

Model	MBW 40	MBW 60	MBW 200
Nominal voltage (Vdc) depends on jumpers		12/24	
Max. continuous current 5' (Amp)	40	60	200
Peak current (Amp)	120	120	480
Operating voltage range (Vdc)	(	6-35	8-32
Consumption (mA)		<7	<3
Alarm output delay	15 seconds		
Alarm output max. current (mA)	500		
Load disconnect delay	1 r	30 secondes	
Voltage level accuracy	0.2V	2%	0.1V
Casework	Anodized aluminium, black		
Weight (gr)	200 580		580
Dimensions HxDxL (mm)	80x60x40	80x <mark>60x40</mark>	145x92x85
Battery protection	Against excessive discharge		
Users protection			Against overvoltages (15.5 / 31 Vdc)
MOSFET switches	No sparks		
Norms	EN 50081-1 (emission	n) EN 5008 <mark>2</mark> -1 (immunity)	EN 50081-1 (emission)
	Automotive D	Directive 95/54/CE	Automotive Directive 95/54/CE

Jumper selectable voltage		
Disengage (V)	Engage (V)	
10	11.5	
10.5	12	
11	13	
11.5	13.8	
21.5	24.5	
22	25	
22.5	25.5	
23	26.5	

#### MBR series

#### MBR - Microprocessor controlled battery separator

Model	MBR 12/24-100	MBR 12/24-160	MBR 12/24-500
Nominal voltage (Vdc)	12/24	12/24	12/24
Charge current max. (Amp)	100	160	500
Connection threshold (Vdc) ± 2%	13.2/26.4	13.2/26.4	13.2/26.4
Disconnection threshold (Vdc) ± 2%	12.8/25.6	12.8/25.6	11.8/23.6
Battery banks	2		
Alternator start	•	•	•
Start contact for batteries paralleling		•	•
Micro switch for remote status indication			•
Dimensions LxHxD (mm)	46x46x80	46x93x96	72x70x80
Weight (gr)	110	300	417
Consumption	<5mA		
Protection of the auxiliary battery against overvoltage	16/32Vdc		
Connection on the battery side	M	6	M8
Other connections	6.3 mm Faston		
Warranty	2 years		
Norms	EN 50081-1 (emission) EN 50082-1 (immunity) Automotive Directive 95/54/CE		

#### 5BM-02

#### SBM-02 - Battery monitor 12 and 24 Vdc (27-175 Vdc in option)

Model		SBM-02	
Supply voltage range	)	9-35 Vdc	
Consumption @ 12V	dc, without BL	9 mA	
Consumption @ 24V	dc, without BL	7 mA	
Input voltage range (	«Auxiliary» battery)	235 Vdc	
Input voltage range (	«Main» battery)	035 Vdc	
Input current range		-9999+9999 A	
Battery capacity range		209990 Ah	
Operating temperature range		-2050°C	
Protection class		IP20 (Frontpanel IP65)	
Dimensions	Front panel	Ø 64 mm	
	Body diameter	Ø 52 mm	
	Total depth	79 mm	

Standart equipment SBIVI-UZ	
Potential free alarm contact	
500A/50mV current shunt	
Optional accessories	
SBM-PS-02-Voltage pre-scaler 1:5	5 (adapting the SBM-02 to input voltage 27-175Vdc)
Connection kit, type SBM-CAB-2 and 2 fuseholders	0, including 20 m of twisted pair cable (3x2x0.5 mm2)
Communication kit, type SBM-Coserial cable and a software	OM, including RS232 interface box, 1.8 m of 9p DSUB
Communication kit, type SBM-Cocable and software.	OM-USB, including USB interface box, 1.8 m of USB
Temperature kit, type SBM;-TEM	IP-20, with 20 m cable
Shunt 1200 A/50 mV, type SH-12	00-50
